

Thread Cutting on the Metal Lathe Class

Note: The basic Metal Lathe Class is a prerequisite for the class.

This class will provide instructions on how to setup the metal cutting lathe to be able to cut threads. If you plan on attending the course, I would strongly recommend that you read the section on thread cutting in the booklet which was handed out in the basic Metal Lathe Class. This will assist in understanding the terminology which will be discussed. Class is limited to 8 and will be about 2 hrs. in length and will be held on 17 Dec. at 1PM.
