

Basic Vertical Milling Machine Class

This is the basic class on the operation of the vertical milling machine. The class will provide instructions on how to setup the metal cutting vertical milling machine to be able to operate it safely. The cost of the class is \$35 for members. Class size is limited to 6 students. If you initially sign-up and cannot attend, please let someone know ASAP that you will not be attending as there are ALWAYS people standing-by for the class.

It is strongly suggested these videos be watched before attending the milling class.

A set of 9 videos on the many features of and operations on the milling machine are covered. They've been viewed and are considered to be a well done and an informative set.

The milling machine used in the videos is different than the one the Bodgery owns. A manual for the Bodgery's Grizzly 9901 Machine can be obtained at the website:

<https://www.manualslib.com/manual/359046/Grizzly-G9901.html>

The video on the operation of the DRO is very good. If the manual for the DRO on the mill is located in a wooden box marked Tool Manuals in the gray cabinet on the outside wall, next to the mill. If manuals are borrowed, please leave a note saying who has them and return them promptly.

A book on the operation of the milling machine can be obtained. This book covers a lot of the same information in the videos and covers some features not addressed in the videos. It can be gotten here:
